Conclusion

For the completion of this assignment, I have used Claude AI as my assistant. My prompts were, 'to use the following script (typically was taken from Script Table as > CREATE To > New Query Editor Window (copied from Create to go)) and list me 50 different lists using Insert Statement.' With the help of Claude AI, all the scripts ran smoothly without any problems, and hence this assignment, SQL 2 Meijer Database is completed, and following the script showing the counts of my eight tables:

The screenshot displays the SQL Server Enterprise Manager interface. The top pane shows a SQL query (SQLQuery23....\praty (55)) that uses a UNION ALL to count records from eight tables: Customer, Store, StoreProduct, Purchase, PurchaseDetail, Product, Category, and Supplier. The bottom pane shows the results of this query, which are displayed in a table with two columns: TableName and RecordCount. The results are ordered by TableName, and the record counts are: Category (50), Customer (50), Product (50), Purchase (50), PurchaseDetail (100), Store (50), StoreProduct (102), and Supplier (50).

```
1 SELECT 'Customer' AS TableName, COUNT(*) AS RecordCount FROM [dbo].[Customer] UNION ALL
2 SELECT 'Store' AS TableName, COUNT(*) AS RecordCount FROM [dbo].[Store] UNION ALL
3 SELECT 'StoreProduct' AS TableName, COUNT(*) AS RecordCount FROM [dbo].[StoreProduct] UNION ALL
4 SELECT 'Purchase' AS TableName, COUNT(*) AS RecordCount FROM [dbo].[Purchase] UNION ALL
5 SELECT 'PurchaseDetail' AS TableName, COUNT(*) AS RecordCount FROM [dbo].[PurchaseDetail] UNION ALL
6 SELECT 'Product' AS TableName, COUNT(*) AS RecordCount FROM [dbo].[Product] UNION ALL
7 SELECT 'Category' AS TableName, COUNT(*) AS RecordCount FROM [dbo].[Category] UNION ALL
8 SELECT 'Supplier' AS TableName, COUNT(*) AS RecordCount FROM [dbo].[Supplier]
9 ORDER BY TableName;
```

	TableName	RecordCount
1	Category	50
2	Customer	50
3	Product	50
4	Purchase	50
5	PurchaseDetail	100
6	Store	50
7	StoreProduct	102
8	Supplier	50
